

10 years warranty for granite Deante sinks guarantees their superb quality. The state-of-art design is confirmed by numerous awards won. The sinks are available in five different colours and most of them can be chosen with draining board on left and right hand side.

Recommended Daily Care

- Regular cleaning minimum once per week is important to maintain the appearance of your sink. Use a soapy nylon brush in a circular motion. Rinse thoroughly. Washing liquid is also recommended.
- Rinsing and drying after use is very important to eliminate any film build-up that may develop from hard water deposits.
- Impregnation once per two week is necessary to keep granite sink in good condition. Impregnation has to be done by silicon oil available in our offer or just an eating oil by applying on cleaned and dry total sink surface.
- Most stains are a result of water-borne minerals. Such stains can collect in the film build-up and can generally be avoided with the daily care recommendations above. Persistent stains can be removed with a variety of non-abrasive cleaners (you may find in our offer), vinegar (for lime scale) or bleach solution. Always rinse thoroughly after using any cleaner.

What To Avoid

- Strong alkalis (ammonia and caustic soda solution) are not recommended.
- Abrasive cleaners -this will dull and scratch the surface and make it more susceptible to stains.
 - Drain unblocking chemicals involving filling the sink with water should not be used.
 - Do not put directly on the sink hot pots or frying pans.
 - Do not use sink as chopping board.
 - Do not throw inside heavy or sharp objects.
